

Nina Doinjashvili

Applied AI Engineer — LLM agents, MCP tooling & evaluation

Paris, France · +33 6 48 78 18 35 · ninodoinjashvili@gmail.com · Portfolio · GitHub · LinkedIn

Applied AI Engineer turning business processes into production AI systems — LLM agents, retrieval pipelines and workflow automation connecting private data, APIs and real users. I put the guarantee in the pipeline rather than the prompt: typed schemas, deterministic validation, and an eval that runs before anything ships. Four client systems in production; open-source agent tooling published with its benchmarks and their limits. RNCP Level 6 AI & Big Data Developer (Le Wagon, Paris).

PROFESSIONAL EXPERIENCE

Applied AI Engineer · Freelance / Independent

2024 — Present

Paris, France · clients in France and Greece

- **Multi-channel booking & support agent** — a business losing enquiries in direct messages. Built an LLM agent (retrieval + tool calling) answering on three channels — Facebook, Instagram and WhatsApp — checking live availability, booking and cancelling across multiple staff calendars, creating customer records, escalating uncertain cases to a human on Telegram and sending day-before SMS reminders. Answers stay current from an owner-editable knowledge source, so prices and hours change without a deploy. Stack: n8n · LangChain agent nodes · OpenAI · Gemini · Google Calendar / Docs / Sheets · Meta Graph API · Twilio.
- **Loyalty & customer-capture automation** — an unattended sales channel with no customer data at all. Built a QR-to-chat loyalty system: a landing page captures customers with duplicate detection, GPT-4o Vision validates receipts and reads the amounts, and points auto-issue single-use discount codes. Turned an anonymous channel into a first-party marketing database with fraud-resistant rewards. Stack: n8n · GPT-4o Vision · WhatsApp / Telegram · Docker · DigitalOcean.
- **Remote retail operations platform** — a fleet of connected machines run through scattered vendor portals with no remote price control. Built a full-stack app consolidating the fleet into one dashboard: remote price sync, reservations, stock and product-lifetime tracking, revenue analytics by location, day and hour, real-time sale alerts. Reverse-engineered the vendor's Android app (smali-level patches) to enable the price sync the stock product never supported. Stack: Node.js · Express · SQLite · REST APIs · background jobs · Web Push · PWA · Docker · apktool / smali.
- **Autonomous social agent** — a restaurant client in Greece with no time to post. An LLM plans each post and writes the Greek caption in the brand's voice, grounded in the real menu and steered away from recent posts; the agent renders a branded image and publishes to Facebook, Instagram and Threads, handling each platform's different upload rules. Runs on a schedule with no human in the loop, and degrades to a deterministic template engine with no API key, so the pipeline still demos at zero cost. Stack: Python · OpenAI · Meta Graph API · Playwright.

OPEN-SOURCE AI ENGINEERING

- **agent-memory-engine** — shared project memory for coding agents (Claude Code, Codex, Cursor) over **MCP**, with token-budgeted recall, revisions, rollback and concurrent access covered by CI. Published with its benchmark *and* its limits: literal recall 0.93, paraphrase recall 0.43 over a 14-memory set. Python · MCP · embeddings.
- **honest-agent** — stops agents inventing tools they do not have. Across 12 benchmark requests: phantom tool calls **6** → **0**, phantom rate on no-tool requests **100%** → **0%**, real-tool coverage unchanged at 100%, no over-refusals. Evaluated in two arms, deterministic and live-LLM. Python · Anthropic API · zero required dependencies.
- **traceable-brief-translator** — turns an incomplete product brief into a six-section engineering dossier where every claim resolves to a cited page span. Pydantic contracts encode the epistemic rules as validation, not prompt instructions, and a deterministic guard re-verifies after human edits: 12/12 and 11/11 contents valid across two cases, 74 and 101 evidence spans, revalidated with zero errors. Python · Pydantic · OpenAI structured outputs · Streamlit · pytest.
- **mcp-skills-kit** — composable agent skills over MCP: instructions, typed tools whose JSON schemas are generated from type hints, and a per-skill eval, in one folder. Runs fully offline with zero required dependencies. Python · FastMCP · hand-written BM25 retrieval.
- **idk-layer** — guard proxy that gives an agent permission to not know: validates every tool call against a registry, injects an abstention clause and prices the waste live — wasted tokens, money burned, phantom calls intercepted. Node.js · zero dependencies.

TECHNICAL SKILLS

AI agents & tooling	LLM agents · agentic workflows · MCP servers and clients · tool calling / function calling · structured outputs with Pydantic · conversation memory · human-in-the-loop escalation · vision / OCR
Retrieval & evaluation	RAG pipelines · embeddings · chunking strategies · hybrid retrieval (dense + BM25) · semantic search · eval harnesses and versioned datasets · CI regression benchmarks · guardrails and abstention · phantom-call detection · token and cost budgeting
Backend & data	Python (async) · FastAPI · Pydantic · pytest · Node.js · Express · SQL · PostgreSQL · SQLite · pandas · NumPy · REST APIs · webhooks · background jobs
LLMs & automation	OpenAI · Anthropic Claude · Google Gemini · GPT-4o Vision · LangChain · n8n · Playwright browser automation · Meta Graph API · Google Workspace APIs · Twilio SMS
ML & infrastructure	scikit-learn · PyTorch · TensorFlow / Keras · NLP · GANs (pix2pix) · model evaluation · Docker · GCP Cloud Run · DigitalOcean · Hugging Face Spaces · GitHub Actions CI/CD · Git · PWA
Languages	French (C1) · English (C1) · Georgian (native)

EDUCATION & CERTIFICATIONS

- Concepteur Développeur en IA & Analyse Big Data — RNCP Level 6** · Le Wagon, Paris · certified January 2026 (RNCP38616)
Specialisation: agentic orchestration · NLP · FastAPI · Docker · Google Cloud Run. Capstone: pix2pix GAN image colorization (U-Net + PatchGAN) with an interactive Streamlit demo.
- Licence — Economics & Management** · Université Paris Nanterre · 2019–2021
- Bachelor's Degree — Business & Economics** · Tbilisi State University · 2010–2014 · recognised by ENIC-NARIC France
- Certifications** · Google AI Essentials · Google Data Analytics coursework · Programming for Everybody, University of Michigan · Data Science & SQL bootcamps · Le Wagon: Intro to AI, Python, SQL
